EDUCATION

JADAVPUR UNIVERSITY
BACHELOR OF ENGINEERING,
INFORMATION TECHNOLOGY
June 2020 | Kolkata, India
CGPA: 7 / 10

CALCUTTA PUBLIC SCHOOL
HIGH SCHOOL
May 2016 | Kolkata, India
95.3%

SKILLS

LANGUAGES

Typescript - Javascript - Python - Golang

FRONT-END

React - Next.js - Tailwind

BACK-END

Node.js - NestJS - gRPC - Golang

DATABASES

PostgreSQL - MongoDB - Redis -
ElasticSearch - ClickHouse

CLOUD & INFRA

AWS - GCP

DEVOPS

Docker - Kubernetes - Jenkins - Grafana -
Prometheus

ARCHITECTURE

Microservices - Event-Driven - System
Design

TOOLS

Kafka - RabbitMQ - Jest

EXPERIENCE

CONVOSIGHT - SENIOR SOFTWARE ENGINEER

March 2025 - Present

- Led end-to-end development of Persona, a core product used by large enterprise clients; collaborated with PM and led FE + QA to deliver production-grade features
- Built Aria, an AI-powered social research insights platform using LangGraph agents for automated insight generation from large-scale social data
- Designed and implemented scalable data ingestion pipelines to onboard branded profiles and high-volume social media posts
- Developed internal tools to detect and track brand crisis trends from ingested data, enabling weekly actionable insights for clients
- Improved product reliability and data processing efficiency through structured pipelines and observability enhancements

DHAN YOJANA - CORE ENGINEER

July 2024 - February 2025

- Architected and built an algorithmic trading platform handling 1000+ transactions/min with concurrent strategy execution in Golang
- Designed microservices for trading lifecycle: signals, risk, execution, and order management
- Built high-performance event processing system ensuring reliable and ordered trade execution
- Developed backtesting platform with configurable strategies and visualization for performance analysis

RAILOFY - SOFTWARE DEVELOPMENT ENGINEER 2

February 2022 - June 2024

- Built scalable data pipelines processing 10K+ daily PNR records with high accuracy
- Designed event-driven notification system using Kafka for reliable multi-channel delivery
- Improved system performance by 65% via query optimization and caching strategies
- Migrated critical services from Node.js to Golang, achieving 2x throughput improvement

YELLOW CLASS - FULLSTACK SOFTWARE DEVELOPER

August 2020 - January 2022

- Developed scalable admin systems with RBAC and operational tooling for support teams
- Built distributed media processing pipelines using AWS services for video content handling
- Improved database performance by 80% through indexing and query optimization
- Engineered recommendation systems improving user engagement by 40%
